Modelling 2026

Model verification

2 November 2026

From Thackner (see book)

You might like verification if you are a perfectionist and excel at finding mistakes

You might like validation if you are interested in real world applications of your model

For verification it helps to be comfortable with these:
* breakpoint()
* modules
* reload()

Does anyone want to see more on these topics? Yes :) Reminder: See section 3.4 in the book (recently revised) and appendix D for more info.
